Presentation by Eileen Rockefeller to Exxon Mobil

May 26, 2010

Good Morning!

My name is Eileen Rockefeller Growald.

I am honored to speak with you today as the great granddaughter of John D. Rockefeller. There are over 130 descendents of his son, John D. Junior. A large majority of my relatives stand with me in spirit to speak to you on behalf of resolution #

Judging by our numbers I think you can see my family is not going away!

Nor is our interest in ExxonMobil's financial future.

We believe, as our great grandfather did, that sound financial practices rest on strategic thinking and principals of efficiency and responsibility.

This is why my family has spent considerable thought in drafting the resolution before you today.

We have greatly benefitted from the success of ExxonMobil and the other oil companies my great grandfather created.

Part of his genius was in recognizing early on the need and opportunity for transitioning to a better and cheaper fuel.

While most companies in the early 1900's dumped gasoline into rivers, Standard Oil used gas to fuel its machines.

My family and I are proud of many things about this company, including your recent safety record, your great efficiency, and the innovative ways you have positioned yourself to expand natural gas production and explore the potential of algae as a fuel.

However, we are concerned that your public statements imply you are basing your long term planning on one, single set of projections, which could prove wrong.

Technology and energy policy are changing the energy landscape, calling into question the prudence of continuing to drive in the same direction. If McKinsey & Co. and other respectable organizations prove correct in projections about, for example, the increase of the electric car or the possibility of airplanes shifting to

biofuels, then the demand for fossil fuels will be far less in 2030 than ExxonMobil is projecting.

We hope you will learn from Kodak and Polaroid where many investors were badly hurt, and do as your tagline says: Take on the world's toughest energy challenge.

We need you to be prepared in case the world does not develop according to your projections, to ensure profitable innovations for the benefit of your long-term shareholders and the world.

Don't become the fossils of your fuel.

ExxonMobil's best friends would like to see it reframed, not as *an oil and gas company* but as a foresighted and strategically minded *energy company.*

We support you Mr. Tillerson and your board, in doing well by doing good.

Thank you.
